

Pressing fentanyl into "Rox" (M30) pills.

Selling Meth and Lidocaine as Cocaine
Examples:

Another, the only way to know for
certain is to test it.
Any drug can be made to resemble

- Lying
- more expensive drugs
- Make cheaper drugs seem like
- Copying popular branding
- Food coloring
- Techniques:

things done to make a drug appear to be
something else

Misrepresented

Impurity

stuff in the substance that is because of
the manufacturing process or the
environment it was made in.

From the environment:

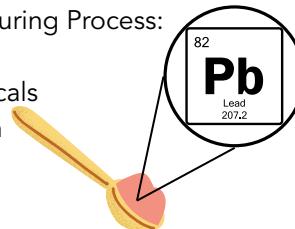

- Cleaning Chemicals
- Heavy Metals

From the Manufacturing Process:

- Plant matter
- Leftover chemicals
- Byproduct from
manufacturing

Examples:

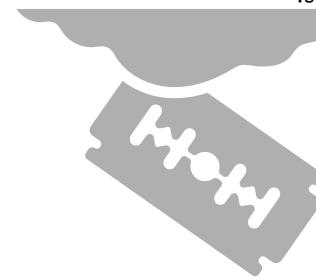

4-ANPP is inactive and left over from
manufacturing fentanyl

Auto grade nitrous oxide often has
dangerous solvents and may even have
metal shards. Food grade and medical
grade have impurities removed to make it
safer.

Selling Meth and Lidocaine as Cocaine
Examples:

Meth is being stored in a baggie that
used to hold fentanyl
Examples:

- Add a cheaper ingredient
- Accidental Contamination
- Make a batch seem higher quality

Psychoactive ingredients added to drugs

Stepped On Adulterant/Cutting it/

Activities

White powder sold as MDMA actually
contains only baking soda and caffeine
powder

Baking soda is a_____

Caffeine powder is a_____

A sample of mescaline has a trace
amount of the cactus it was refined from.

The trace amount of cactus is a_____

A plug is adding binders in order to
press pills but they don't mix them in
very well.

The pills have low_____

starch

Starch is added to MDMA so it can be
pressed into a pill

it possible to smoke (crack cocaine)
Baking soda cooked with cocaine makes
Examples:

restrictions

some fillers may not meet dietary

- Change the route(s) of administration
- Absorbed
- Change the speed the substance is
- Binders to help pills hold together
- Stabilize active ingredients
- And increases profits
- Diluted product is easier to measure

Possible Reasons:

Inactive ingredients added to drugs
Binders/Filler/Bulk

the best way to ensure uniformity.
Crushing and mixing your supply is
expperiences from the same batch if it
You can end up with very different
isn't mixed well.

How well your supply is mixed

Uniformity

Know Your Drugs

It is almost impossible to find "pure"
drugs on the street.

Even drugs straight from the pharmacy
have binders in them.

Every time drugs change hands there is
another opportunity for someone to
alter them.

Unless the person you got the drugs
from used a drug checking program they
probably don't know exactly what is in
their drugs either.
